

LARGE SALVAGE PACKAGING

Salvage Packaging allows for the transport of damaged, defective, or leaking packaging. The large salvage packaging unit can hold one of our RIKUTEC IBC. A container is also available to hold our RIKUTEC drum. This specific salvage packaging is manufactured in Germany and UN approved according to ADR/RID/IMDG codes, packaging groups II and III.

ADR 2015 makes special provisions for transport packaging used to carry dangerous goods when the original packaging has leaked, is damaged or defective or if it does not conform to ADR requirements. Any packaging with a volume of more than 60 liters that is involved in a spill must be transported in salvage packaging.

Product characteristics

- Construction made of 3 mm steel sheet
- Reinforced edging
